THE CLEARWATER SYSTEM

Introducing the World's first PTZPC!

The Clearwater System core is the PTZPC— powered by an Intel® Core™ i5 vPro™ processor, a 120 GB Intel® SSD, Intel's most advanced wireless capability in the Centrino 7265AC™ with BT, 8 GB of RAM, and a full version of Microsoft® Windows 10™ all inside of a custom designed Compass camera housing.

In addition, the whole system includes a wireless media keyboard, a Bluetooth Speakerphone by Harman/Kardon®, the new Flare button for one button preset camera position recall, and of course all cables and accessories to complete your Visual Communications Space. Just add displays or projectors up to 4K resolution and the room is ready.

The Clearwater System is the new solution for the conference space, what we have done is to simplify the installation and deployment. As easy as simply providing a power outlet near the front of the room. No need to run cables from the PC to the camera, no cables for the audio solution, and it can be configured to be completely cable free with the Wireless Display capability! And one more thing—for those organizations looking for a fully integrated space, the Clearwater System is the first purpose designed Intel® Unite™ Hub enabled endpoint.

That's right- the first truly **Cordless Conference Room**!
